Company Profile

Since Vestadezh company has started its production activity, the company has been developing the modern installation support systems with respect to the advancement in building industry technology. This collection utilizes the most advanced technology and relying on the creative and experienced engineers, Vestadezh has been able to produce high quality product.

Vestadezh is one the first manufacture of modern utility support systems that is certified with ISO 9001, 18001 and 1400. The activities of this company includes manufacturing different types of pipe clamps and installation supports, providing consulting services and executive suggestions.

Vestadezh has played an active and productive role in some of the most important international projects. Today, we have 3 branches and more than 20 dealers in different continents.

The accurate design and analysis and laboratory as well as the high level of field expertise in installation support system enabled us to provide various types of supports.

Now, by relying on our most valuable asset, our human resource including more than 250 staff working as production workers, R&D, commercial and financial experts, sales team and also 3 up-to-date factory sites in different regions and precise development plans, we are ready to present our products and services all around the world.

WORLDWIDE

Contributing with countries around the world as supplier, Vestadezh is fulfilling in service sectors, goods export and import.

- Deliver superior quality services and goods to our clients
- Provide fast services and assure on time delivery
- Fit our products to precisely meet the needs of our clients

Our Approach

How we do business
is as important as
what we do

We provide products and solutions that help people design and build safer, stronger and more reliable buildings and structures.

lasting relationships

We are committed to build a business for the long term, developing relationships that last. We want to be a well-managed organization that people are proud to work for, has the trust of our clients and the communities we serve, and minimizes its impact on the environment.

Values

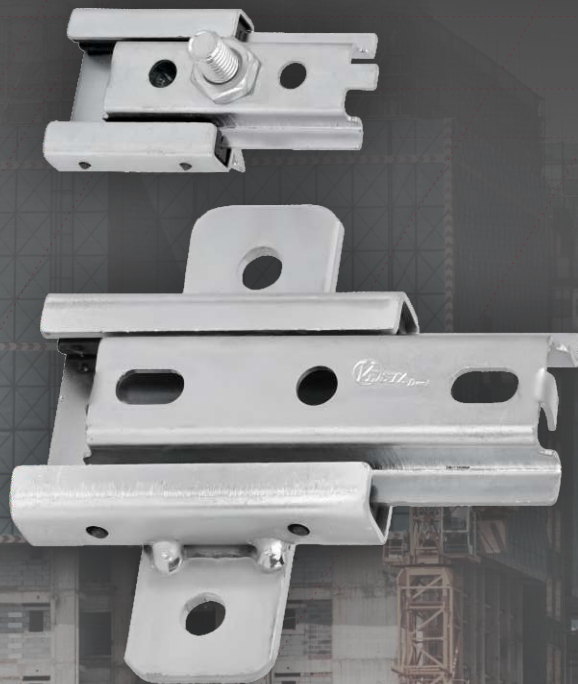

- Relentless Customer Focus
- Long-Range View
- High-Quality Products
- Be The Leader
- Everybody Matters
- Enable Growth
- Risk-Taking Innovation
- Give Back

The value driver Vision & People further develops the values of trust and integrity, the commitment to Health & Safety and the desire to be at the forefront of sustainable construction solutions and innovation. We want to foster an entrepreneurial leadership style and a focus on the long-term success of Vestadezh.

Modern Installation Systems
Committed to Quality & Innovation

The Process Of Production In Vestadezh

Certificates

QA

Designing, establishing, auditing, reviewing and promoting management systems according to ISO, DIN, CE and Intl standards.

Coordinating and relationships with certificate issuing organizations for auditing, issuing and extending ISO 9001, 18001 and 14001

HSE

Vestadezh Company pursues the following goals in order to pay proper attention to environmental issues and strive to reduce safety and health risks.

- Continuous improvement of HSE management system

Reducing the risks and potential harmful factors of health, safety and environment resulting from activities, products or services to the lowest possible levels.

In order to achieve the above goals, the following below measures are considered:

- Establish enforcement practices and create a culture of attention to HSE.
- Providing facilities, safe and healthy equipment and maintaining them in safe conditions
- Explicitly articulate problems and issues as well as promoting participation in HSE topics
- Developing training courses to increase the ability of employees to work safely and maintain their health and raising staff awareness by referring to the general HSE regulations.
- Waste management and optimal use of resources and energy.
- Reducing and, if possible, avoiding emissions and discharges that are considered harmful to our home planet.
- Reducing potential harmful factors and adverse environmental impacts of development plans, services and products to a minimum.

QC

Designing and supervising the SCM stages of raw materials and production in order to ensure the adaptation of quality and safety of the products to legal, customer and organizational requirements.

Supervising the contractors to ensure the adaptation of quality and safety of the products to legal, customer and organizational requirements.

Supervising the warehousing and transportation conditions according to legal, customer and organizational requirements.

Services

ENGINEERING

In Vestadezh, we try to provide the best engineering solutions to fix non-structural components onto the main structure. In this regard, our engineering team will be by your side from designing, through installation supervision until the installation is in use.

We offer:

- Meeting the project officials in order to have a better understanding of their expectations and find out about general information of the main structure (its type and use)
- Detecting probable installation limits and realistic design.
- Design considering international codes such as ASCE-7, AISI, ACI, AISC, NFPA13, SMACNA, ASHRAE, etc. and using finite element software like SAP (and soon by Vestadezh calculating software) to reach the optimum design.
- Providing calculation results along the executive plans. Seismic and dynamic design are presented on demand.
- Designing anchor and rebar to reinforce structures.
- Training for customer operational team and supervise the installation process.
- Providing BIM information and related families to ensure a better understanding of Vestadezh products on projects.

Customized production

Our R&D department offers customized production on demand. This includes our productions with deferent characteristics (size, dimension, etc.) or a whole new product according to customers' needs.

Here are some of our R&D services:

1. Production under ASTM, DIN, ISO standard codes.
2. Compliance of manufactured products with product performance standards. For example, production of sprinkler clamps according to DIN standard and certified with international approval.
3. Ability to produce parts based on the customer's order and make the desired changes in application.
4. Periodic optimization of products in terms of dimensions and quality of production.
5. Providing technical data related to each product including dimensions, design loading limits under desired application conditions.
6. Providing innovative solutions for optimal use of products in technical and executive designs.
7. Offering detailed catalog to provide further information for more skilled users.
8. Developing the products' installation methods.
9. Generating content in the form of periodic articles for each family of products.
10. Certified with reputable national centers such as the road and housing research center of Iran and the national standards organization.

Other Services

Supervision:

As we are committed to make sure that our partners are fully satisfied with our products and designs, we offer supervision of installation to ensure proper results. This might include part-time or full-time supervision based on customers' needs.

Training:

In order to reach a mutual understanding with operational team, we offer training so that they have a technical view over the whole picture of the project.

Dedicated technical staff:

Considering the size of the project, we offer a dedicated technical person (or people) to the project to be completely aligned with the project. This will prevent future misunderstanding because they work as one team.

HSE:

Although Vestadezh products comply with applicable laws, regulations and standards in the construction support industry, the company also creates necessary executive programs to ensure compliance with the rules and procedures and beside that, it implements HSE principles with proper planning and training.

What is more, by minimizing the onsite risks and protecting employees and other stakeholders, we prevent resources waste and air, land and water pollution by using appropriate technologies and operational methods. We do not stop risk prevention by training all involved parties and supervising the installation procedures if needed.
